

I turn your course material into a practice-exam app under your name.

For course creators, bootcamps, associations, and employers who certify their own staff. You send your course material. I write 150 to 250 questions, map every one to the published exam blueprint, and deliver them in an app that carries your name and works offline.

Nick McGregor — PMP, CPHQ, MHA candidate, Baylor University. Ten years in healthcare operations. I built the practice-exam banks for the PMP and the CPHQ, then sat both exams studying only on what I wrote — and passed both.

● HOW IT WORKS

- 1 The gap audit — free**
Your material mapped against the published blueprint. Yours to keep either way.
- 2 I write the questions**
150 to 250 questions, written and reviewed as separate passes. Your experts sign off.
- 3 Your app, your name**
Practice sets, timed mock exams, readiness by domain. Installs to a phone, works offline.
- 4 Updates when the exam changes**
The blueprint changes, I realign the bank, you keep selling the same product.

● WHAT THE FREE AUDIT HANDS YOU

A coverage map of your material, domain by domain. In this example it covers 60% of the exam — the missing 40% is 80 questions I would write.

Domain A · 25% of the exam	+14 questions
Domain B · 30% of the exam	+38 questions
Domain C · 30% of the exam	+8 questions
Domain D · 15% of the exam	+20 questions

Example figures, on a four-domain blueprint and a 200-question pilot. Your audit carries your blueprint's real domains and your own counts.

The audit costs nothing.

You see your gaps, and my standard, before a contract exists.

The bank is yours.

Source files and the analytics export ship with the build.

Your experts approve every question.

Authoring and review are separate passes; neither replaces your sign-off.

● WHAT YOU GET

The coverage map, yours to keep	free
Questions with rationales, tagged to domain and task	150–250
A second reviewer's record on every question	every question
The app, under your name	installs, offline
Cohort analytics and the source question files	yours to export
Hosting, updates, and blueprint realignment	while you hold seats

● PROOF YOU CAN CHECK

I built the PMP and CPHQ banks and passed both exams on them. The PMP bank publishes its per-task coverage table — 963 questions across all 26 tasks — and both run in production at [sprintbank.app](#).

The six-week pilot build **starts at \$10,000**.
Seats, updates, and hosting are **\$15 to \$20 per seat, per year**.

What moves the number: how many questions you need, how many domains the blueprint covers, and how clean your source material is. The price is the price — the free gap audit gives you your exact figure before you commit to anything.

Start with the free gap audit. It costs you an email.
